Hardware as a Service

Hardware as a Service, also known as (HaaS), can enable your school to afford a complete end-to-end ICT solution, which can include anything necessary to bring your school's IT network into the 21st century. This can include servers, desktops, notebooks, infrastructure components, licensing, and much more, all in a monthly, recurring revenue based solution, with no up-front costs.

Trying to pay for and maintain your school's computer hardware in-house can be a major problem. Besides the initial capital investment and necessary technical resources involved, you constantly have to pay for upgrades as new technology is released. Reduced funding for new school builds means that schools have to be more considered in how they acquire their ICT equipment and services. With these pressures, Hardware as a Service provides the opportunity for schools to roll out exciting and affordable ICT solutions.

Managing a leading edge education ICT solution is so important in today's fast moving world and in ensuring that your students experience technologies and ICT services that equip them to enter the newly emerging industries within the country's knowledge economy.

The resources required to purchase, configure and support educational hardware and software is often too much for all but the larger schools. However, with the Hardware as a Service subscription based payment model, your school can acquire the ICT solution that will support and enhance your educational ambitions, whilst also freeing up your working capital.

No Initial Costs
Everything your school needs without an expensive, upfront, capital outlay.

Easy Monthly Payments
Affordable monthly payments with no hidden costs.

Equipment Renewal
Guaranteed upgrades and a guaranteed refresh of ICT equipment and associated services on a timeframe that suits your school's needs.

Control of Your ICT Network
Greater standardisation of equipment, guaranteed warranties and support, and greater control of all your ICT assets.
